VISIT Conducted in Hodeida Governorate. Al-KHOKA KSR Taibah CAMP

1. No triage area
2. No report to the DHIS2
3. IPC need strengthen in term of hand washing distance between beneficiaries
4. Integrated Referral system

Yemen Flash floods update

The Executive Unit for IDPs (ExU) reported that heavy rains damaged IDP sites in Al Khawkhah, Hays and At Tuhayat districts on the west coast between 31 July and 3 August, and left an estimated 940 families in urgent need of assistance; assessments to date have confirmed needs among 230 families.

Please share with the Health Cluster any health response you made to the floods effected areas so we can reflect it in the next snapshot produced by OCHA

Report of UN Inter-Agency Mission to West Coast

- The status of the health infrastructure along the west-coast is considered to be very poor with all facilities requiring some form of rehabilitation. Power and fresh water supply are also significant limiting factors.
- In Dhubab, not a single health facility exists after existing facilities were destroyed during the conflict,
- Al Khokha has only one medical doctor, the rest of the staff are nurses;
- The Therapeutic Feeding Centre in Al Khokha reported nine children having been admitted, while the TPC in
- Al Mokha reported five children having been admitted;
- The health centers have sufficient supplies of medicine and medical supplies but lack appropriate storage Facilities.

Report of UN Inter-Agency Mission to West Coast

- The Ras Al Ara District Hospital in Lahj (the only other DH in the west coast in addition to Al Mokha) has
- limited capacity and de facto functions at a level of a health centre. It cannot perform blood transfusions nor
- chest X-rays services and has limited laboratory facilities. Its operating theatre is not functioning, and all
- critical cases require transferal to Aden City. Funding by IOM ceased in May 2020.
- The DH provides an estimated 80- 90 daily consultations and admits patients only for observation, while it is supposed to be 30-
- bed hospital.
- The DH also provides health services to migrants and supports and estimated deliveries of 60 to 80 babies each month;
- While the dependence on referrals to Aden City is high along the west-coast, there are only five functioning ambulances: two in Al Khokha, two in Al Mokha and one Ras Al Ara.

Field VISIT Conducted to Taiz Governorate. Mawza'a District Health Facility (Jisr Al-Hamli Health Center)

1. No triage.
2. No deliveries carried out in the center in previous months
3. Low Number of ante-natal (9 In May and 8 in June)-and Post-Natal care.
4. No Tetanus Vaccination in July.

Referrals Expansion

- WHO, in cooperation with NYC Medics, to develop pre-hospital care and referral pathway (including addressing costs for affected people) for the west-coast
- PU-AMI in Mokha are looking forward to expand Referral. By now, they have referrals to Mokha Hospital and Emergency Surgical (MSF) Hospital we need a common integration for the west coast.

• Mapping

I received from the following ORGANIZATIONS

- YCFA
- PU-AMI
- ADO
- ACF
- ADD
- DEEM
- IMCI
- IYCY
- SCI
- FHI 360

**HEALTH
CLUSTER**
YEMEN

- **Partners updates & challenges**

AOB

- **Regular health facility mapping**
- **Ad Hoc meeting for organization that intervene and will intervene in Mocha Hospital for more effective and efficient implementation avoiding duplication (WHO,DEEM,IMCI,WHO and Human appeal)**
- **FHI 365 Al-Wara'a intervention**
- **ADD Al Gashah Health Unit issue**
- **IYCY and DEEM**
- **ADO and YCFA Intervention**
